Product line: TERRA
Your tanksize: 1 liters
Schedule type: Light feeding
Water EC: 0.6
Dosage units: ml/1 liters
Recommended pH: 5.8 - 6.2

The guidelines in the table aren't an iron law, but can help novice growers to develop a sophisticated fertilisation strategy. The optimum fertilisation strategy is further determined by factors such as: temperature, humidity, plant species, root volume, moisture percentage in substrate, water dosage strategy, etc.

a. This period varies depending on the species and number of plants per m².
Mother plants remain in this phase until the end (6 – 12 months).

b. The changeover from 18 to 12 hours varies depending on the variety. The rule of thumb is to change after 2 weeks.

c. Reduce hours of light if ripening goes too fast. Watch out for increasing Relative Humidity.

d. Double CANNAZYM dosage to 50 ml/10 liters, if substrate is reused.

e. 20 ml/ 10 liters standard. Increase to a maximum of 40 ml/10 liters for extra flowering power.

- EC:
 - EC+ value is based in mS/cm when EC water = 0.0 at 25°C, pH 6.0
- pH:
 - Recommended pH is between 5.8 - 6.2
 - Adding pH- can increase EC
 - Use pH- grow in the vegetative phase to lower the pH
 - Use pH- bloom in the generative phase to lower the pH
