This chart includes a starting background tap water EC reading of 0.4. EC levels are a guideline only!  
pH 5.8 - 6.5    Temperature: Min 24°C - Max 28°C    Humidity: Min 40 % - Max 60 %

#### TOP TIPS:

- Always use equal measurements of both A & B
- Check your tap water EC to ensure the relevant HW/SW nutrients are used
- When using the Soft Water variants of these nutrients your EC will be 0.1 higher for every week than the readings shown

- If required, adjust the pH. Recommended pH range when using the VitaLink products is 5.8 - 6.5. You can find everything you need to measure and adjust pH in our VitaLink ESSENTIALS range.
- The optimal temperature range of the nutrient solution is 20°C - 24°C.
- Use nutrient solution immediately after mixing or keep solution circulating to prevent settling.

- During prolonged vegetative growth, when growing mother plants or when deficiency is observed use 1ml/L of VitaLink CalMag alongside main nutrients and other additives.
- To prevent your plants suffering from cold, heat or drought stress or to alleviate the impact these conditions may have on your plants, use VitaLink Heat, VitaLink Chill or VitaLink Hydrate.

- This growing schedule is recommended for the vast majority of plants grown in favourable environmental conditions. Please keep in mind that any growing schedule is always dependent on plant species and variety, temperature, humidity, type of substrate and system you are growing in. Always pay close attention to your plants to find out what their requirements are as they may vary depending on your specific plant and conditions.
