GROW	4	7	9	11	15	16	16	10	10	-	-	-	
------	---	---	---	----	----	----	----	----	----	---	---	---	--

BLOOM	4	7	9	11	15	16	16	20	20	25	20	15	
-------	---	---	---	----	----	----	----	----	----	----	----	----	--

FLUSH

**THESE** numbers here for the Microbase, Grow & Bloom are ml/10L. So, mix these amounts into a bucket with 10L of cold water.

**All** Additives are in ml/10L of water.

Please be aware that with the addition of P/K Plus EC ranges will be higher. Dilute the nutrient mixture with more cold water to bring it back into your target range.

## ADDITIVES

LIQUID SAND	-	10	10	15	15	20	20	20	25	25	25	-	
-------------	---	----	----	----	----	----	----	----	----	----	----	---	--

PRO-TECT	-	5	5	5	5	5	7	7	7	7	7	-	
----------	---	---	---	---	---	---	---	---	---	---	---	---	--

P/K PLUS	-	-	-	-	-	-	-	10	20	30	30	-	
----------	---	---	---	---	---	---	---	----	----	----	----	---	--

HYGROZYME	-	10	20	20	20	10	10	10	10	10	10	-	
-----------	---	----	----	----	----	----	----	----	----	----	----	---	--

Soft Water EC Start - 0	0.6	0.8	1.0	1.2	1.4	1.6	1.6	1.8	1.8	1.8	1.6	1.2	
----------------------------	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	--

Hard Water EC Start - 0.6	1.2	1.4	1.6	1.8	2.0	2.2	2.2	2.4	2.4	2.4	2.2	1.8	
------------------------------	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	--

This lot of numbers are your EC measurements for each week. It's important to check this bit is correct, it's what makes your crop successful.

**EC VALUES** differ from region to region, depending on your local water supply. So remember to always take a reading of the base water supply before adding any nutrient solutions and add this to the target ranges outlined.

**IMPORTANT** PLANTS TAKE UP DIFFERENT MINERALS AND NUTRIENTS AT CERTAIN PH RANGES. TO GET THE MOST OUT OF YOUR FERTILISER AND PLANTS SET YOUR PH TO PH 5.6 AND LET IT RISE THROUGH THE RANGES UNTIL YOUR NEXT WATER CHANGE.
